PROFESSIONAL EAR WAX REMOVAL

Aftercare advice

Simple guidance following your ear-wax removal

What you might notice today

- **Improved hearing** - usually immediate
- **Mild echo or "tunnel" sensation** - settles in a few hours
- **Slight tickle or itch in the canal** - resolves on its own
- **A bit of debris on your pillow** - normal

Looking after your ears for the next 24 hours

- **Keep your ears dry** - shower with a cotton-wool plug coated in petroleum jelly if you wish
- **Avoid swimming for 24 hours**
- **Don't put anything in your ears**, including cotton buds
- **If you wear hearing aids**, refit them as normal once you feel ready

Contact us if you experience

- Persistent pain, especially worsening overnight
- Discharge (clear or coloured)
- Sudden or significant hearing change
- Ongoing dizziness past the day of the procedure
- Anything else that feels wrong

To prevent wax build-up

- **Don't use cotton buds** - they push wax deeper
- For prone ears, consider olive-oil drops once a week as maintenance
- Have your ears checked at a sensible interval (your practitioner will advise)
